Frontend developer with Vue and Nuxt in the blood, heart of a nerd and (almost) always wearing a hat. I am passionate about building frontends that look good, but also perform well, thriving when I get challenged.

Outside of work, I am an old school nerd who loves computers, boardgames, tabletennis, mountain biking and long hikes in nature.

## Experience

### Limbo Works ApS - Frontend developer

October 2023 - September 2025

- Worked on a modular frontend engine in Nuxt.js and UnoCSS that transforms data from Umbraco into reusable content blocks, enabling scalable page types, utilities, and features for Limbo Citi's platform. With focus on scalability and flexibility, the platform is now used in 10 different municipalities.
- Developed a contingency web app planning system in Nuxt.js and UnoCSS for Hovedstadens Beredskab, enabling Copenhagen municipalities to create and maintain safety plans for schools and public buildings. Implemented role-based authorization, API handling, and a pdf generator. This generator can be used for digitalisation of the plans, and makes printable PDFs for potential emergency signage.

### InPrint A/S - Fullstack developer

January 2023 - September 2025

- Designed and developed a company website in Laravel, Vue.js, and TailwindCSS, and worked on an employee web app for connecting InPrints staff and customers on the projects.
- Created a customized internal shopify store for a dental client, delivering a tailored shopping experience for ordering print materials.

### Stjerneskuddet Hedensted A/S - Kindergarten assistant

March 2019 - August 2019

### Netto, Salling Group A/S - First assistant

January 2017 - January 2019 | Billund, Vejle & Jelling

## Education

### IBA Erhvervsakademi Kolding

August 2019 - January 2023

- Bachelor in Web development
- Multimediedesigner
